Index		1125

Chapter 1: Introduction

1.0	Introducing biodiversity
1.1	Aims and objectives
1.1.1	Objective of the Assessment
1.1.2	Linkages with the Convention of Biological Diversity and other initiatives
1.2	Defining and characterizing biodiversity
1.3	The coverage of the Assessment
1.3.1	Biological aspects
1.3.1.1	The magnitude and distribution of organismal diversity
1.3.1.2	The dynamics of biodiversity: genetics, speciation and extinction
1.3.1.3	The dynamics of biodiversity: ecosystem functioning
1.3.2	Human society and biodiversity
1.3.2.1	Cultural diversity
1.3.2.2	The values of biodiversity
1.3.3	Strategies for biodiversity conservation and sustainable use
1.3.3.1	Basic principles
1.3.3.2	Conservation approaches
1.3.3.3	Improving the knowledge base
1.3.3.4	Human and institutional capacity
1.3.3.5	Global and national co-ordination

References

Chapter 2: Characterization of Biodiversity

Executive Summary

2.0	Introduction to the characterization of biodiversity
2.0.1	What is biodiversity?
2.0.2	What components of biodiversity are to be characterized?
2.0.3	What is mean by characterizing biodiversity?
2.1	Biodiversity from a taxonomic and evolutionary perspective
2.1.0	Introduction: patterns of living organisms- classification and evolution
2.1.0.1	Folk classification and the origin of scientific taxonomy
2.1.1	The basics of taxonomic characterization: what taxonomists do
2.1.1.1	The role of specimens in taxonomy
2.1.1.2	Stability of scientific names

- 2.1.2 Characterizing flora, fauna and microbiota: preparing Floras, handbooks and keys
 - 2.1.2.1 The amount of research work involved
 - 2.1.2.2 Modern developments: databases and expert identification systems
- 2.1.3 Characterizing systematic patterns: the species, their evolution and their classification
 - 2.1.3.1 Analysing systematic data to reconstruct evolutionary history
 - 2.1.3.2 From phylogenetic tree to formal classifications
 - 2.1.3.3 Why do classification schemes change?
- 2.1.4 Characterizing species
 - 2.1.4.1 The morphological species concept
 - 2.1.4.2 The biological species concept
 - 2.1.4.3 The phylogentic species concept
 - 2.1.4.4 The pluralistic approach
- 2.1.5 The power of taxonomy and taxonomic products
 - 2.1.5.1 Taxonomic products: an essential technological infrastructure for biotechnology, natural resources management, and regulation
 - 2.1.5.2 As a summary of biodiversity and evolutionary patterns
 - 2.1.5.2 As a basis for prediction
 - 2.1.5.4 Other uses of taxonomic techniques
- 2.1.6 Taxonomic measures of species diversity
 - 2.1.6.1 Evaluating taxonomic isolation of individual species
 - 2.1.6.2 Measuring taxonomic diversity of biota or ecosystems
- 2.1.7 Conclusion
- 2.2 Genetic diversity as a component of biodiversity
 - 2.2.0 Intro
 - 2.2.1 Partitioning of genetic variability below the species level
 - 2.2.1.1 Analysis of karyotypic variation
 - 2.2.1.1.1 Karyotypic variation analysis techniques
 - 2.2.1.1.2 Genetic diversity studies
 - 2.2.1.1.3 Assessment
 - 2.2.1.2 Molecular methods for assessing levels of genetic diversity
 - 2.2.1.2.1 Allozymes
 - 2.2.1.2.2 Restriction fragment length polymorphism (RFLP)
 - 2.2.1.2.3 Multi-locus DNA fingerprinting of minisatellite loci
 - 2.2.1.2.4 Single-locus DNA fingerprinting of minisatellite loci
 - 2.2.1.2.5 Gene cloning and polymerase chain reaction (PCR)
 - 2.2.1.2.6 Nucleotide sequences
 - 2.2.1.2.7 Applications of PCR
 - 2.2.1.2.8 Conclusion
 - 2.2.2 Patterns of differentiation under domestication
 - 2.2.2.1 Characterizing biodiversity within domesticated species
 - 2.2.2.2 The genetic basis of cultivars and breeds
 - 2.2.2.3 Species complexes and gene flow
 - 2.2.2.4 Future developments

- 2.2.3 Investigating genetic diversity
 - 2.2.3.1 Type of biological material available
 - 2.2.3.2 Research and development
- 2.2.4 Case studies of the use of genetic techniques in studies of within- species and between- species diversity
 - 2.2.4.1 *Partula*
 - 2.2.4.2 *Anolis*
- 2.3 Biodiversity from an ecological perspective
 - 2.3.1 Intro
 - 2.3.2 Diversity within areas
 - 2.3.2.1 Species richness and species diversity
 - 2.3.2.1.1 Comparing diversity across species groups: coherence patterns
 - 2.3.2.1.2 Comparing areas of different sizes
 - 2.3.2.1.3 The relative abundance of species
 - 2.3.2.2 Taxic diversity
 - 2.3.2.3 Functional diversity
 - 2.3.2.3.1 Autecological diversity (species in isolation)
 - 2.3.2.3.2 Synecological diversity (species in communities)
 - 2.3.3 Diversity between areas
 - 2.3.3.1 The general difficulties in classifying ecological communities
 - 2.3.3.2 Classifications based on species composition
 - 2.3.3.2.1 Phytosociology
 - 2.3.3.2.2 Global classification of species distribution
 - 2.3.3.3 Global classifications of ecosystems
 - 2.3.3.4 Characterizing and classifying landscapes
 - 2.3.3.5 Diversity in ecological systems
 - 2.3.3.6 The importance of better ecological classifications
 - 2.3.4 Conclusions

Chapter 3: Magnitude and Distribution of Biodiversity

- 3.0 Intro
- 3.1 The current magnitude of biodiversity
 - 3.1.0 Intro
 - 3.1.1 Ecosystems and habitats
 - 3.1.1.1 Ecosystem diversity
 - 3.1.1.2 Habitat diversity
 - 3.1.1.3 Assessment of global ecosystem diversity
 - 3.1.1.4 Assessment of local biological diversity
 - 3.1.1.5 Comparisons of different areas
 - 3.1.2 Organism inventory
 - 3.1.2.1 Inventorying life: the pivotal role of species
 - 3.1.2.2 The record to date: described species
 - 3.1.2.3 The true richness of life
 - 3.1.2.4 Sources of undisclosed species richness
 - 3.1.2.4.1 Benthic species richness

- 3.1.2.4.2 Terrestrial anthropods
 - 3.1.2.4.3 Tropical tree crowns
 - 3.1.2.4.4 Fungi and other microorganisms
 - 3.1.2.4.5 Other groups
 - 3.1.2.4.6 Mutualists and parasites
 - 3.1.2.5 Problems and prospects
 - 3.1.2.5.1 Well-known groups are poor reference points
 - 3.1.2.5.2 Undisclosed sources of species richness
 - 3.1.2.5.3 The scale of uncertainty
 - 3.1.2.5.4 Conceptual and operational issues
 - 3.1.2.6 The tools for the job
 - 3.1.3 Genetic Diversity
 - 3.1.3.1 Animal genetic diversity
 - 3.1.3.2 Plant genetic diversity
 - 3.1.3.3 Other organisms
 - 3.1.4 Domesticated diversity
 - 3.1.4.1 Sources and centres of domesticated biodiversity
 - 3.1.4.2 Domesticated plant diversity
 - 3.1.4.3 Domesticated animal biodiversity
 - 3.1.4.4 Domesticated aquatic diversity
 - 3.1.4.5 Domesticated microbial and invertebrate diversity
 - 3.1.4.6 Domesticated diversity at risk
- 3.2 The distribution of biodiversity
 - 3.2.0 Intro
 - 3.2.1 Geographical patterns of biodiversity
 - 3.2.1.1 Gradients
 - 3.2.1.1.1 Terrestrial environments
 - 3.2.1.1.2 Marine environments
 - 3.2.1.2 Centres of diversity
 - 3.2.1.2.1 What is a centre of diversity?
 - 3.2.1.2.2 Do centres of diversity share general features?
 - 3.2.1.2.3 Are centers of diversity for different taxa congruent?
 - 3.2.1.2.4 Do centres of diversity correspond to areas of
endemism?
 - 3.2.1.3 Introduced species
 - 3.2.1.4 Domesticated species
 - 3.2.1.5 Rarity
 - 3.2.1.6 Diversity and scale
 - 3.2.2 Biodiversity patterns: correlates and explanations
 - 3.2.2.1 Environmental factors and biodiversity
 - 3.2.2.1.1 Climate and productivity
 - 3.2.2.1.2 Environmental chemistry
 - 3.2.2.1.3 Stress
 - 3.2.2.1.4 Heterogeneity
 - 3.2.2.1.5 Biological interactions
 - 3.2.2.2 Speciation and extinction

- 3.2.2.2.1 Species production
 - 3.2.2.2.2 Extinction
 - 3.2.2.3 Ecological theories of species diversity
 - 3.2.2.3.1 Processes that add and remove species
 - 3.2.2.3.2 Equilibrium versus non-equilibrium explanations
 - 3.2.2.3.3 Theories of local coexistence
 - 3.2.2.3.4 Terrestrial landscape, marine environment and diversity
 - 3.2.2.4 Tests of theories of local coexistence
 - 3.2.2.4.1 Community saturation
 - 3.2.2.4.2 Regional enrichment
 - 3.2.2.4.3 Community convergence in species diversity
 - 3.2.2.5 The relationship between local and regional diversity
 - 3.2.2.5.1 Empirical evaluation of the relationship between local and regional diversity
 - 3.2.2.6 Taxon-specific patterns of diversity: dispersal
 - 3.2.2.6.1 Passive dispersal
 - 3.2.2.6.2 Active dispersal
 - 3.2.2.6.3 Vectors
 - 3.2.2.6.4 Interactions of dispersal with breeding system
 - 3.2.2.7 History, biography and diversity
 - 3.2.2.7.1 Non-convergence and the roles of history and biogeography
 - 3.2.2.7.2 Diversity anomalies and geographic and historical circumstances
 - 3.2.2.7.3 Congruence and independence of histories
 - 3.2.2.7.4 Differential extinction
 - 3.2.2.7.5 History and ecological diversity patterns
 - 3.2.3 Concluding comments
- 3.3 Endemism and biodiversity
 - 3.3.1 Endemism: concepts and perspectives
 - 3.3.1.1 Background
 - 3.3.1.2 Categories of endemics
 - 3.3.1.3 A phylogenetic perspective
 - 3.3.1.4 Biases
 - 3.3.2 Evaluating endemism
 - 3.3.2.1 Units of measurement
 - 3.3.2.2 Percentages versus counts
 - 3.3.3 Patterns
 - 3.3.3.1 Centres of endemism
 - 3.3.3.2 Other patterns
 - 3.3.3.3 Congruence
 - 3.3.4 Endemism: correlates and causes
 - 3.3.4.1 Regional species richness
 - 3.3.4.2 Area
 - 3.3.4.3 Environmental factors

- 3.3.4.4 Biotope
- 3.3.4.5 Biological factors
- 3.3.4.6 Taxonomic correlates
- 3.3.4.7 modelling
- 3.3.4.8 Endemism and reserve selection
- 3.3.5 Special conservation considerations
 - 3.3.5.1 Endemic taxa as tools in conservation
 - 3.3.5.2 Pointers in the conservation of endemic taxa

Chapter 4: Generation, Maintenance and Loss of Biodiversity

- 4.0 Intro
- 4.1 Large-scale history of biodiversity
 - 4.1.1 Intro
 - 4.1.2 The nature of the fossil record
 - 4.1.2.1 General considerations
 - 4.1.2.2 Estimating fossil biodiversity with higher taxa
 - 4.1.3 History of biodiversity
 - 4.1.3.1 Animal diversity in the oceans
 - 4.1.3.2 Pre-animal biodiversity in the oceans
 - 4.1.3.3 Plant diversity on land
 - 4.1.3.4 Terrestrial arthropods
 - 4.1.3.5 Terrestrial tetrapod vertebrates
 - 4.1.4 Extinction through time
 - 4.1.4.1 Background extinction
 - 4.1.4.2 Mass extinction
 - 4.1.4.3 Recoveries from mass extinctions
 - 4.1.5 Late Cenozoic biodiversity
 - 4.1.5.1 Global diversity over the last 15 million years
 - 4.1.5.2 End-Pleistocene extinctions
 - 4.1.5.3 Biotic invasions
 - 4.1.5.4 Holocene community disequilibrium
 - 4.1.6 Conclusion
- 4.2 Processes of genetic diversification
 - 4.2.1 Intro
 - 4.2.2 Measures of genetic diversity
 - 4.2.2.1 Measures for single loci
 - 4.2.2.2 Multiple populations
 - 4.2.2.3 Multiple loci
 - 4.2.2.4 Quantitative characteristics
 - 4.2.2.5 Genomic variation
 - 4.2.3 Process governing genetic evolution
 - 4.2.3.1 Mutation
 - 4.2.3.2 Genetic drift
 - 4.2.3.3 Natural and artificial selection
 - 4.2.2.3.1 Selection on phenotypic characters
 - 4.2.2.3.2 Selection on individual loci

- 4.2.2.3.3 Spatial and temporal variation in selection
 - 4.2.2.3.4 Selection on multiple characters
 - 4.2.2.3.5 Response to selection
 - 4.2.3.4 Dispersal and gene flow
 - 4.2.3.5 Recombination
 - 4.2.4 Maintenance of genetic diversity
 - 4.2.4.1 Mutation and selection
 - 4.2.4.2 Inbreeding depression and heterosis
 - 4.2.4.3 Selection opposed by gene flow
 - 4.2.4.4 Outbreeding depression
 - 4.2.4.5 Gene flow opposed by genetic drift
 - 4.2.5 Summary
- 4.3 Diversification of species
 - 4.3.1 Population differentiation
 - 4.3.2 Speciation
 - 4.3.2.1 Allopatric speciation
 - 4.3.2.2 Parapatric speciation
 - 4.3.2.3 Sympatric speciation
 - 4.3.2.4 Other modes of speciation
 - 4.3.3 Multiplication of species
 - 4.3.4 Summary
- 4.4 Ecology of extinctions
 - 4.4.1 Current rate of extinctions
 - 4.4.1.1 Past extinctions
 - 4.4.1.2 Recent extinctions
 - 4.4.1.3 Current status and rate of extinctions
 - 4.4.2 Mechanisms of extinction
 - 4.4.2.1 Single populations
 - 4.4.2.1.1 Low population density: Allee effects
 - 4.4.2.1.2 Demographic stochasticity
 - 4.4.2.1.3 Environmental stochasticity
 - 4.4.2.1.4 Genetic factors in extinction
 - 4.4.2.1.5 Summary
 - 4.4.2.2 Metapopulations: assemblages of several local populations
 - 4.4.2.2.1 Colonization-extinction stochasticity
 - 4.4.2.2.2 Regional stochasticity
 - 4.4.3 Causes of extinction
 - 4.4.3.1 Loss of habitat
 - 4.4.3.2 Changes in habitat quality
 - 4.4.3.3 Habitat fragmentation
 - 4.4.3.4 Persecution and exploitation of populations
 - 4.4.3.5 Change in the biotic environment
 - 4.4.3.6 Summary
 - 4.4.4 Predicting extinction rates
 - 4.4.4.1 Single populations
 - 4.4.4.2 Metapopulations

- 4.4.4.3 Population viability analysis
- 4.4.5 Summary
- 4.5 Dynamics of biodiversity at the community and ecosystem level
 - 4.5.1 Intro
 - 4.5.2 Competition and community organization
 - 4.5.3 Predation and mutualism as diversity-maintaining process
 - 4.5.4 How species are interdependent through manifold indirect interactions
 - 4.5.5 The role of spatial and temporal variability of the environment in the maintenance of biodiversity
 - 4.5.6 From ecosystems to genes: the role of coevolution in the generation of biodiversity
 - 4.5.7 Towards an integrated approach
 - 4.5.8 Summary

Chapter 5: Biodiversity and Ecosystem Functioning: Basic Principles

- 5.0 Intro
 - 5.0.1 Background
 - 5.0.2 Important concepts
 - 5.0.3 Section organization
- 5.1 Context: biodiversity and ecosystem services
- 5.2 Functional properties of biodiversity: a hierarchical perspective
 - 5.2.1 Genetic diversity and ecosystem functioning
 - 5.2.2 Biodiversity effects on patterns and processes of communities and ecosystems
 - 5.2.2.1 Intro
 - 5.2.2.2 Relationship between species and the functioning of ecological communities and ecosystems: hypothesis concerning similarity amongst species
 - 5.2.2.3 Key Concepts and terms
 - 5.2.2.4 Integrated framework
 - 5.2.2.5 Effects of diversity *per se* on ecosystem processes
 - 5.2.2.6 Mechanisms of community and ecosystem change due to species traits
 - 5.2.2.7 Ecosystem-level feedbacks to biodiversity of invasions and extinctions
 - 5.2.2.8 Conclusions
 - 5.2.3 Effects of spatial structure on ecosystem functioning
 - 5.2.3.1 Intro
 - 5.2.3.2 Effects of spatial structure on species diversity and abundance
 - 5.2.3.3 Effects of spatial structure on species interactions
 - 5.2.3.4 Spatial structure and ecosystems
 - 5.2.4 Biodiversity and landscape to regional scales
 - 5.2.4.1 Intro
 - 5.2.4.2 Diversity and ecosystem functioning at landscape to regional scales
 - 5.2.4.3 Keystone ecosystems
 - 5.2.4.4 Land-use diversity
 - 5.2.4.5 Summary

- 5.3 Drivers and dynamics of changes in biodiversity
 - 5.3.1 Overview of disturbance
 - 5.3.1.1 Characteristics of disturbance
 - 5.3.1.2 Relationship of disturbance to other ecological processes
 - 5.3.1.3 Principles of disturbance
 - 5.3.1.4 Disturbance and management
 - 5.3.2 Human-induced perturbations on biodiversity
 - 5.3.2.1 Intro
 - 5.3.2.2 Changes in land and water use
 - 5.3.2.3 Changes in atmospheric composition
 - 5.3.2.4 Climate change
 - 5.3.2.5 Conclusion
- 5.4 Conclusions
 - 5.4.1 Background
 - 5.4.2 What are the influences of genetic diversity on ecosystem functioning?
 - 5.4.3 What are the influences of species diversity on ecosystem functioning?
 - 5.4.4 What are the influences of landscape diversity on ecosystem functioning?
 - 5.4.5 What are the human influences on ecosystem functioning?
 - 5.4.6 What are the management implications for goods and services?

Chapter 6: Biodiversity and Ecosystem Functioning: Ecosystem Analyses

- 6.0 Intro
 - 6.0.1 Background
 - 6.0.2 Biome essays and ecosystems processes
 - 6.0.3 Cross-biome comparisons and syntheses
- 6.1 Biome Essays
 - 6.1.1 Artic and alpine systems
 - 6.1.1.1 Intro
 - 6.1.1.2 Productive capacity, biomass, decomposition and nutrient cycling
 - 6.1.1.3 Soil structure and nutrient pools
 - 6.1.1.4 Water distribution, balance and quality
 - 6.1.1.5 Feedbacks to atmospheric properties
 - 6.1.1.6 Landscape and waterscape structure
 - 6.1.1.7 Biotic linkages and species interactions
 - 6.1.1.8 Microbial activities
 - 6.1.1.9 Summary and relevance to human activities
 - 6.1.2 Tropic forests
 - 6.1.2.1 Intro
 - 6.1.2.2 Human impacts on biodiversity
 - 6.1.2.3 Productive capacity, biomass, decomposition, and nutrient cycling
 - 6.1.2.4 Water distribution, balance, and quality
 - 6.1.2.5 Atmospheric properties and feedback
 - 6.1.2.6 Landscape and waterscape structure
 - 6.1.2.7 Biotic linkages and species interactions
 - 6.1.2.8 Microbial activities
 - 6.1.2.9 Summary and relevance to human activities

- 6.1.3 Temperate forest systems
 - 6.1.3.1 Intro
 - 6.1.3.2 Productive capacity, biomass, decomposition and nutrient cycling
 - 6.1.3.3 Soil structure and nutrient pools
 - 6.1.3.4 Water distribution, balance and quality
 - 6.1.3.5 Feedbacks to atmospheric properties
 - 6.1.3.6 Landscape and waterscape structure
 - 6.1.3.7 Biotic linkages and species interactions
 - 6.1.3.8 Microbial activities
 - 6.1.3.9 Summary and relevance to human activities
- 6.1.4 Arid and semi-arid lands
 - 6.1.4.1 Intro
 - 6.1.4.2 Productive capacity, biomass, decomposition and nutrient cycling
 - 6.1.4.3 Soil structure and nutrient pools
 - 6.1.4.4 Water distribution, balance and quality
 - 6.1.4.5 Feedbacks to atmospheric properties
 - 6.1.4.6 Landscape structure
 - 6.1.4.7 Biotic linkages and species interactions
 - 6.1.4.8 Microbial activities
 - 6.1.4.9 Summary and relevance to human activities
- 6.1.5 Tropical savannahs
 - 6.1.5.1 Intro
 - 6.1.5.2 Human impacts on biodiversity
 - 6.1.5.3 Productive capacity, biomass and decomposition
 - 6.1.5.4 Soil structure and nutrients
 - 6.1.5.5 Water distribution, balance and quality
 - 6.1.5.6 Atmospheric properties
 - 6.1.5.7 Landscape and waterscape structure
 - 6.1.5.8 Biotic linkages and species interactions
 - 6.1.5.9 Microbial activities
 - 6.1.5.10 Summary and relevance to human activities
- 6.1.6 Boreal forests
 - 6.1.6.1 Intro
 - 6.1.6.2 Human-induced impacts and threats to biodiversity
 - 6.1.6.3 Productive capacity, biomass and decomposition
 - 6.1.6.4 Soil structure and nutrients
 - 6.1.6.5 Water distribution, balance and quality
 - 6.1.6.6 Feedbacks to atmospheric properties
 - 6.1.6.7 Landscape structure
 - 6.1.6.8 Biotic linkages and species interactions
 - 6.1.6.9 Microbial activities
 - 6.1.6.10 Summary and relevance to human activities
- 6.1.7 Temperate grasslands
 - 6.1.7.1 Intro
 - 6.1.7.2 Human impact on biodiversity
 - 6.1.7.3 Productive capacity

- 6.1.7.4 Decomposition and soil structure
- 6.1.7.5 Water distribution and balance
- 6.1.7.6 Atmospheric properties
- 6.1.7.7 Landscape structure
- 6.1.7.8 Biotic linkages and species interactions
- 6.1.7.9 Microbial activities
- 6.1.7.10 Summary and relevance to human activities
- 6.1.8 Mediterranean-type ecosystems
 - 6.1.8.1 Intro
 - 6.1.8.2 Productive capacity, biomass and decomposition
 - 6.1.8.3 Soil structure and nutrients
 - 6.1.8.4 Water distribution, balance and quality
 - 6.1.8.5 Atmospheric properties
 - 6.1.8.6 Landscape and waterscape structures
 - 6.1.8.7 Biotic linkages and species interactions
 - 6.1.8.8 Microbial activities
 - 6.1.8.9 Summary and relevance to human activities
- 6.1.9 Coastal systems
 - 6.1.9.1 Intro
 - 6.1.9.2 Major human-induced impacts on and threats to biodiversity
 - 6.1.9.3 Productive capacity, biomass, decomposition and nutrient cycling
 - 6.1.9.4 Sediment structure
 - 6.1.9.5 Water movement and quality
 - 6.1.9.6 Feedbacks to atmospheric properties
 - 6.1.9.7 Landscape and waterscape structure
 - 6.1.9.8 Biotic linkages and species interactions
 - 6.1.9.9 Microbial activities
 - 6.1.9.10 Summary and relevance to human activities
- 6.1.10 Coral reefs
 - 6.1.10.1 Intro
 - 6.1.10.2 Threats to reefs
 - 6.1.10.3 Productivity capacity, biomass and decomposition
 - 6.1.10.4 Sediment structure and nutrients
 - 6.1.10.5 Water circulation and quality
 - 6.1.10.6 Atmospheric properties
 - 6.1.10.7 Landscape and seascape structure
 - 6.1.10.8 Biotic linkages and species interactions
 - 6.1.10.9 Microbial activities
 - 6.1.10.10 Summary and relevance to human activities
 - 6.1.10.11 Management implications
- 6.1.11 Mangrove systems
 - 6.1.11.1 Intro
 - 6.1.11.2 Human impacts on relevant biodiversity components
 - 6.1.11.3 Productive capacity, biomass and decomposition
 - 6.1.11.4 Soil structure and nutrients
 - 6.1.11.5 Water distribution, balance and quality

- 6.1.11.6 Atmospheric properties
- 6.1.11.7 Landscape and waterscape structure
- 6.1.11.8 Biotic linkages and species interactions
- 6.1.11.9 Microbial activities
- 6.1.11.10 Summary and relevance to human activities
- 6.1.12 Open oceans
 - 6.1.12.1 Intro
 - 6.1.12.2 Threats to the ocean
 - 6.1.12.3 Productivity capacity, biomass, decomposition and nutrient cycling
 - 6.1.12.4 Sediment structure and nutrient pools
 - 6.1.12.5 Water distribution, balance and quality
 - 6.1.12.6 Feedbacks to atmospheric properties
 - 6.1.12.7 Landscape and waterscape structure
 - 6.1.12.8 Biotic linkages and species interactions
 - 6.1.12.9 Microbial activities
 - 6.1.12.10 Summary and relevance to human activities
- 6.1.13 Lakes and rivers
 - 6.1.13.1 Intro
 - 6.1.13.2 Productivity capacity, biomass, decomposition and nutrient cycling
 - 6.1.13.3 Water distribution, balance and quality
 - 6.1.13.4 Atmospheric properties
 - 6.1.13.5 Landscape and waterscape structure
 - 6.1.13.6 Biotic linkages and species interactions
 - 6.1.13.7 Microbial activities
 - 6.1.13.8 Summary and relevance to human activities
- 6.2 Cross-biome comparisons
 - 6.2.1 Productivity capacity and biomass accumulation
 - 6.2.1.1 Intro
 - 6.2.1.2 Lessons from agriculture
 - 6.2.1.3 Habitat variation in space and time
 - 6.2.1.4 Production and resource augmentation
 - 6.2.1.5 Biomass and disturbance
 - 6.2.2 The soil system
 - 6.2.2.1 Intro
 - 6.2.2.2 Lessons from agriculture
 - 6.2.2.3 Soil organic
 - 6.2.2.4 Functional importance of spatial complexity
 - 6.2.2.5 Summary and relevance to human activities
 - 6.2.3 Effects of biodiversity on water distribution and quality
 - 6.2.3.1 Intro
 - 6.2.3.2 Distribution of water
 - 6.2.3.3 Groundwater fluxed
 - 6.2.3.4 Evapotranspiration
 - 6.2.3.5 Filtration and assimilative capacity
 - 6.2.3.6 Trophic cascades and other biotic influences on water quality
 - 6.2.3.7 Summary and implications

- 6.2.4 Atmospheric feedback
 - 6.2.4.1 Intro
 - 6.2.4.2 Biogenic emissions and atmospheric properties
 - 6.2.4.3 Fluxes of atmospheric constituents into the biosphere
 - 6.2.4.4 Climate change and biosphere/ atmosphere interactions at the level of biodiversity and ecosystem functioning
 - 6.2.4.5 Conclusions and management implications
- 6.2.5 The influence of biodiversity on landscape structure
 - 6.2.5.1 Intro
 - 6.2.5.2 Specific systems
 - 6.2.5.2.1 Arid systems
 - 6.2.5.2.2 Temperate and boreal forests and grasslands
 - 6.2.5.2.3 Tropical savannahs
 - 6.2.5.2.4 Wet tropics
 - 6.2.5.2.5 Aquatic systems
 - 6.2.5.3 Generalizations
- 6.2.6 Biotic linkages and ecosystem functioning
 - 6.2.6.1 Intro
 - 6.2.6.2 Human impacts
 - 6.2.6.3 Effects of removal of species on biotic linkages
 - 6.2.6.3.1 Empirical evidence of the effect on ecosystem functioning
 - 6.2.6.4 Effects of addition of species on biotic linkages
 - 6.2.6.4.1 Empirical evidence of the effect on ecosystem functioning
 - 6.2.6.5 Cross-biome comparison and ecosystem services
 - 6.2.6.5.1 Pollination linkages
 - 6.2.6.5.2 Seed dispersal linkages
 - 6.2.6.5.3 Grazing linkages
 - 6.2.6.6 Conclusion
- 6.2.7 Microbial diversity and ecosystem processes
 - 6.2.7.1 Background
 - 6.2.7.2 Important aspects of microbial diversity
 - 6.2.7.2.1 Substrate-based groups
 - 6.2.7.2.2 Sized-based groups
 - 6.2.7.2.3 Species-specific interactions
 - 6.2.7.2.4 Qualitative and stabilizing effects of diversity
 - 6.2.7.3 Changes in biodiversity and microbial activity
 - 6.2.7.3.1 Biotic interactions
 - 6.2.7.3.2 Trace gas production
 - 6.2.7.3.3 Carbon and nutrient cycling
 - 6.2.7.4 Conclusion
- 6.2.8 Agroecosystems
 - 6.2.8.1 Intro
 - 6.2.8.2 Impact of agriculture intensification on relevant biodiversity components

- 6.2.8.3 Ecosystem consequences of impacts
 - 6.2.8.3.1 Productivity capacity, biomass and decomposition
 - 6.2.8.3.2 Soil structure and nutrients
 - 6.2.8.3.3 Water distribution, balance and quality
 - 6.2.8.3.4 Atmospheric properties
 - 6.2.8.3.5 Landscape and waterscape structure
 - 6.2.8.3.6 Biotic linkages and species interactions
 - 6.2.8.3.7 Microbial activities

6.3 Conclusions

- 6.3.1 Background
- 6.3.2 The importance of ecosystem approach
- 6.3.3 Ecological goods and services
- 6.3.4 Drivers of change
- 6.3.5 Factors affecting the functional sensitivities of ecosystems
- 6.3.6 Invasions, introductions and species losses
- 6.3.7 Transformations and fragmentation of populations and ecosystems
- 6.3.8 Goods and services at risk
- 6.3.9 Implications

Chapter 7: Inventorying and Monitoring

- 7.0 Intro
- 7.1 Why inventory and monitor biodiversity?
- 7.2 Scales, planning and approaches to inventorying and monitoring
- 7.3 Integrates approaches
- 7.4 Capacity building

Chapter 8: The Resource Base for Biodiversity Assessments

- 8.0 Intro
- 8.1 Historical considerations
- 8.2 Protected area systems
- 8.3 General biological reference collections
 - 8.3.1 Intro
 - 8.3.2 Distribution and dimensions of biological reference collections
 - 8.3.3 Preservation methods
 - 8.3.4 Accessibility of biological reference collections
 - 8.3.5 Collection health
 - 8.3.6 Costs of biological reference collections
- 8.4 Information resources
 - 8.4.1 Libraries
 - 8.4.2 Electronic media
 - 8.4.3 Directories of biodiversity information
 - 8.4.4 Catalogues, indexes and registers for described species
 - 8.4.5 Identification aids
- 8.5 Living plant collections
 - 8.5.1 Types of living plant collections
 - 8.5.2 Botanic garden and arboretum collections

- 8.5.2.1 What is botanic garden?
- 8.5.2.2 The extent, distribution and resources of botanic gardens
- 8.5.2.3 Botanic garden networks and linkages
- 8.5.2.4 What plants are in botanic garden collections?
- 8.5.2.5 Conservation programmes
- 8.5.2.6 Further sources of information
- 8.5.3 National plant collections
- 8.6 Zoological gardens, insectaries and aquaria
- 8.7 Marine stations
 - 8.7.1 Marine stations and the marine realm
 - 8.7.2 Marine stations as biodiversity observations
 - 8.7.3 Existing networks
- 8.8 Genetic resource collections
 - 8.8.1 What are genetic resource collections?
 - 8.8.2 Management of genetic resource collections
 - 8.8.3 Types of genetic resource collection
 - 8.8.4 Content of existing genetic resource collections
 - 8.8.4.1 Plant genetic resources
 - 8.8.4.2 Livestock
 - 8.8.4.3 Fungi and other microorganisms
 - 8.8.5 Constraints
 - 8.8.6 The development of genetic resource collections
 - 8.8.6.1 Plants
 - 8.8.6.2 Livestock and other animals
 - 8.8.6.3 Fungi and other microorganisms
- 8.9 Sequence databanks
- 8.10 Human resources
 - 8.10.1 The magnitude of the resource
 - 8.10.1.1 Biosystematists
 - 8.10.1.2 'Amateurs'
 - 8.10.1.3 Parataxonomists
 - 8.10.1.4 Indigenous peoples
 - 8.10.2 The deployment of the resource
 - 8.10.2.1 Geographic deployment
 - 8.10.2.2 Subject deployment
 - 8.10.3 Productivity and working practices
 - 8.10.3.1 Productivity
 - 8.10.3.2 Improving working practices

Chapter 9: Data and Information Management and Communication

- 9.0 Intro
- 9.1 Biodiversity information: its nature and its users
- 9.2 Data collection and management
- 9.3 Tools and technologies
- 9.4 Making information more widely available
- 9.5 Sources of biodiversity information

- 9.6 Legal aspects of information management
- 9.7 Institutional capacity development

Chapter 10: Biotechnology

- 10.0 Intro
- 10.1 Accessing and using molecular DNA data on biodiversity
- 10.2 Applications of biotechnology for the utilization of biodiversity
- 10.3 Impacts of biotechnology on biodiversity
- 10.4 Conclusions

Chapter 11: Human Influences on Biodiversity

- 11.0 Intro: conceptual framework
- 11.1 History of human impact on biodiversity
 - 11.1.1 Intro
 - 11.1.2 The hunter-gatherer phase
 - 11.1.3 The farming phase
 - 11.1.4 The urban phase
 - 11.1.5 The modern high-energy phase
 - 11.1.6 History of conservation traditions
 - 11.1.7 Historical trends in property rights
- 11.2 The impact of human activity on biodiversity
 - 11.2.1 Intro
 - 11.2.2 The mechanisms of human impacts on biodiversity
 - 11.2.2.1 Exploitation of wild living resources
 - 11.2.2.2 Expansion of agriculture, forestry and aquaculture
 - 11.2.2.2.1 Intro
 - 11.2.2.2.2 Traditional cultivation
 - 11.2.2.2.3 Modern cultivation
 - 11.2.2.2.4 Fisheries
 - 11.2.2.2.5 Forestry
 - 11.2.2.3 Habitat loss and fragmentation
 - 11.2.2.4 Indirect negative effects of species introduced by humans
 - 11.2.2.4.1 Intro
 - 11.2.2.4.2 Introduced species and their distribution
 - 11.2.2.4.3 Effects of invasive species and ecosystem susceptibility
 - 11.2.2.4.4 Recover of soil, water, and ecosystems
 - 11.2.2.5 Pollution of soil, water, and atmosphere
 - 11.2.2.6 Global climate change
 - 11.2.2.3 Forces driving human impact on biodiversity
 - 11.2.3.1 The rules governing the use of biological resources
 - 11.2.3.1.1 Intro
 - 11.2.3.1.2 The impact of cultural values on biodiversity
 - 11.2.3.1.3 Property rights and the use of biological resources
 - 11.2.3.1.4 Impact of access to information intellectual
 - 11.2.3.2 Growth in human population and natural resource consumption

- 11.2.3.3 Urbanisation and biodiversity
 - 11.2.3.3.1 Effect of urbanization on biodiversity
 - 11.2.3.4 Consequences of increasing demand for resources
 - 11.2.3.5 Economic systems and policies that fail to value the environment and its resources
 - 11.2.3.6 Inequity in the ownership, management and flow of benefits from the use and conservation of biological resources
 - 11.2.4 Conclusions
- 11.3 Information requirements for the sustainable use of biodiversity
 - 11.3.1 Intro
 - 11.3.2 Monitoring biodiversity, its use, and changes in natural and managed ecosystems
 - 11.3.2.1 Long-term monitoring
 - 11.3.2.2 Monitoring the rehabilitation of degraded ecosystems
 - 11.3.2.4 Species introductions
 - 11.3.2.5 Inventory and data bases
 - 11.3.3 Strengthening social science research and the connections between biological and social processes
 - 11.3.3.1 Knowledge, innovations, and practices of indigenous and local communities
 - 11.3.3.2 Legal aspects
 - 11.3.3.3 Economics and biodiversity
 - 11.3.3.3.1 Contribution of wild species to local economics and to international trade
 - 11.3.3.3.2 How to value what we have?
 - 11.3.3.3.3 Managing trade and having biodiversity too
 - 11.3.3.4 Toward sustainability use of resources and ecosystems: the need for new management options
 - 11.3.4.1 Ecosystems management
 - 11.3.4.2 Living resources management
 - 11.3.4.3 The question of common property of natural resources
 - 11.3.4.4 Predicting the consequences of social and economic changes on biological diversity
 - 11.3.4.5 Knowledge-based systems
 - 11.3.4.6 Developments transfer of technologies relevant to the sustainability use of biological diversity
- 11.4 Future prospects
 - 11.4.1 Intro
 - 11.4.2 Trends
 - 11.4.2.1 Population and resources
 - 11.4.2.2 Changes in terrestrial and aquatic ecosystems
 - 11.4.2.3 Climate change
 - 11.4.2.4 Implications of global change
 - 11.4.3 Human adaptations
 - 11.4.3.1 The benefits of technology
 - 11.4.4 Constraints on human adaptations

- 11.4.4.1 Problems of uneven development
- 11.4.4.2 Prices, politics and alternative models of development
- 11.4.4.3 Building the capacity to adapt to change
- 11.4.4.4 Uncertainty

Chapter 12: The Economic Value of Biodiversity

- 12.1 Economic value and biodiversity
 - 12.1.1 Intro
 - 12.1.2 Market failure, policy failure and the problem of externality
 - 12.1.3 Poverty, discounting and value
 - 12.1.4 The value of diversity
 - 12.1.5 Biodiversity and ecosystem functions
 - 12.1.6 Concluding remarks
- 12.2 Use and nonuse value
 - 12.2.1 A typology of values
 - 12.2.2 Value, ethics and equity
 - 12.2.3 Social and cultural differences in the perception of value
 - 12.2.4 Use value: species versus habitats
 - 12.2.5 Use value: habitats versus ecosystems
 - 12.2.6 Concluding remarks
- 12.3 The valuation of biodiversity: theory and methodology
 - 12.3.1 Intro
 - 12.3.2 Stated preference methods: contingent valuation and contingent ranking
 - 12.3.2.1 Contingent valuation
 - 12.3.2.2 Contingent ranking
 - 12.3.3 Revealed preferences methods: travel cost and random utility models
 - 12.3.3.1 The travel cost model
 - 12.3.3.2 The hedonic travel cost model
 - 12.3.3.3 The random utility model
 - 12.3.4 Production function approaches
 - 12.3.5 Revealed preference and opportunity cost
 - 12.3.5.1 Change in productivity method
 - 12.3.5.2 Change in earnings method
 - 12.3.5.3 Defensive or preventative expenditures method
 - 12.3.5.4 Replacement cost method
 - 12.3.5.5 Substitution or proxy method
 - 12.3.5.6 The shadow project method
 - 12.3.5.7 Compensation cost method
 - 12.3.5.8 Benefits transfer
 - 12.3.6 Concluding remarks
- 12.4 The problem of risk and uncertainty
 - 12.4.1 Distinguishing risk and uncertainty
 - 12.4.2 Risks and uncertainty in environmental decision-making
 - 12.4.2.1 Scenario analysis
 - 12.4.2.2 Extended scenario analysis (sensitivity analysis)
 - 12.4.2.3 Monte Carlo analysis

- 12.4.2.4 Worst-case scenario
 - 12.4.3 The precautionary principle and safe minimum standards
 - 12.4.4 Concluding remarks
- 12.5 The valuation of species and habitats: empirical results
 - 12.5.1 Intro
 - 12.5.2 The value of genetic resources and biotechnology
 - 12.5.3 The value species
 - 12.5.4 Estimates of the value of parks and protected areas
 - 12.5.5 Concluding remarks
- 12.6 The valuation of ecosystem functions: empirical results
 - 12.6.1 The indirect value of biological resources
 - 12.6.2 Estimates of the use value of forests
 - 12.6.3 The total value of forests
 - 12.6.4 Valuation and policy
 - 12.6.5 Concluding remarks
- 12.7 Valuation in the conservation of biodiversity
 - 12.7.1 The goals of conservation
 - 12.7.2 Protected areas, conservation and development
 - 12.7.3 Incentives and the appropriation of value: the local problem
 - 12.7.3.1 Structural adjustment programmes and policies
 - 12.7.3.2 Raising local benefits
 - 12.7.3.3 Lowering local opportunity costs
 - 12.7.3.4 Lowering forest protection costs
 - 12.7.3.5 Water fees as conservation incentives
 - 12.7.3.6 Internalizing ecotourism benefits
 - 12.7.3.7 Reforestation incentives
 - 12.7.3.8 Differential land-use tax
 - 12.7.3.9 Environmental bonds
 - 12.7.3.10 Forest compacts
 - 12.7.3.11 Carbon offsets
 - 12.7.3.12 Transferable development rights
 - 12.7.3.13 Other instruments
 - 12.7.4 Incentives and the appropriation of value: The global problem
 - 12.7.4.1 Global environmental markets
 - 12.7.5 Incentives, property rights and the distribution of wealth
 - 12.7.6 Concluding remarks

Chapter 13: Measures for conservation of Biodiversity and Sustainable Use of its Components

- 13.0 Introduction
- 13.1 A framework for managing biodiversity
 - 13.1.1 Introduction
 - 13.1.2 Context for biodiversity management
 - 13.1.3 Methods and tools for biodiversity management
 - 13.1.4 Approaches for managing biodiversity in a complex world
 - 13.1.4.1 Strategic planning

- 13.1.4.2 Bioregional and ecosystem management programmes
 - 13.1.4.3 Adaptive management
 - 13.1.5 Conclusion
- 13.2 Defining priorities for conservation and sustainable use
 - 13.2.1 Introduction
 - 13.2.2 Genetically based methods for establishing priorities
 - 13.2.3 Species-based methods for establishing priorities
 - 13.2.4 Ecosystem-based methods for establishing priorities
 - 13.2.5 Integrative approaches for establishing priorities
 - 13.2.6 Experience in setting geographically-based priorities
 - 13.2.7 Principles for geographic priority setting
 - 13.2.8 Conclusion
- 13.3 Measures for sustainable use of biodiversity in natural resource management
 - 13.3.1 Introduction
 - 13.3.2 Managing biodiversity in agriculture
 - 13.3.2.1 Managing biodiversity in traditional agriculture
 - 13.3.2.2 Managing biodiversity in modern agriculture
 - 13.3.2.3 Managing agriculture impacts on natural resources
 - 13.3.3 Managing biodiversity in forestry
 - 13.3.3.1 Managing biodiversity in traditional forestry
 - 13.3.3.2 Managing biodiversity in commercial forestry
 - 13.3.3.2.1 Measures for the sustainable use and management of forest genetic resources
 - 13.3.3.2.2 Minimizing the impacts of forestry operations on biodiversity
 - 13.3.3.2.3 Biodiversity inventory and monitoring
 - 13.3.4 Managing biodiversity in fisheries
 - 13.3.4.1 Managing biodiversity in traditional fisheries
 - 13.3.4.2 Managing biodiversity in small-scale fisheries
 - 13.3.4.3 Managing biodiversity in large-scale fisheries
 - 13.3.4.4 Newly evolving practices in large-scale fisheries
 - 13.3.4.5 Managing biodiversity in in aquaculture
 - 13.3.5 Managing wild flora and fauna
 - 13.3.5.1 Wildlife management
 - 13.3.5.2 International commerce in wild species
 - 13.3.5.3 Incentives for managing wild populations sustainably
 - 13.3.6 Biodiversity prospecting
 - 13.3.7 Managing impacts of tourism on biodiversity
 - 13.3.8 Managing impacts of urbanization and infrastructure on biodiversity
 - 13.3.8.1 Conserving biodiversity in urban areas
 - 13.3.8.1.1 Habitat types
 - 13.3.8.1.2 Species diversity in urban habitats
 - 13.3.8.1.3 Actions to conserve urban diversity
 - 13.3.8.2 Managing the impacts of infrastructure on biodiversity
 - 13.3.9 Conclusion
- 13.4 Protecting and restoring ecosystems, species, populations, and genetic diversity

- 13.4.1 Introduction
- 13.4.2 Protection ecosystems
 - 13.4.2.1 Protected areas
 - 13.4.2.1.1 Protected areas classification, size, and distribution
 - 13.4.2.1.2 Managing biodiversity in protected areas
 - 13.4.2.1.3 Defining management objectives
 - 13.4.2.1.4 Effectiveness of protected areas for maintaining biodiversity
 - 13.4.2.2 Managing corridors and natural habitat fragments
 - 13.4.2.2.1 Response of ecosystems to fragmentation
 - 13.4.2.2.2 Corridors in fragmented landscapes
 - 13.4.2.2.3 Protection and management of fragments
 - 13.4.2.3 Maintaining ecosystem functions and processes
- 13.4.3 Protection species, populations and genetic resources
 - 13.4.3.1 Threatened and endangered species classifications and species management and recovery plans
 - 13.4.3.1.1 Threatened and endangered species classifications
 - 13.4.3.1.2 Management plans
 - 13.4.3.1.3 Recovery plans
 - 13.4.3.1.4 IUCN Species Survival Commission Action Plans
 - 13.4.3.2 *In situ* conservation of species, populations and genetic resources
 - 13.4.3.3 *Ex situ* strategies
 - 13.4.3.3.1 Botanical gardens
 - 13.4.3.3.2 Zoos and aquaria
 - 13.4.3.3.3 Gene banks
 - 13.4.3.3.4 *Ex situ* technologies
- 13.4.4 Restoration and rehabilitation of species, populations and ecosystems
 - 13.4.4.1 Restoration of species and populations
 - 13.4.4.2 Ecosystem and landscape restoration
- 13.4.5 Conclusion
- 13.5 Social-economic strategies to sustainably use, conserve, and share the benefits of biodiversity
 - 13.5.1 Introduction
 - 13.5.2 Social interventions at local and community levels
 - 13.5.2.1 Indigenous people
 - 13.5.2.2 Local participation
 - 13.5.2.3 Methods of participatory inquiry
 - 13.5.2.4 Community forest management
 - 13.5.2.5 Local people and protected areas
 - 13.5.3 Economic tools and incentives
 - 13.5.3.1 Local economic incentives
 - 13.5.3.2 Conserving and using non-timber forest products
 - 13.5.3.3 Ecotourism
 - 13.5.3.4 Private reserves and private land leasing
 - 13.5.4 Conclusion

- 13.6 Legal measures for sustainable use and protection of biodiversity
 - 13.6.1 Introduction
 - 13.6.2 Customary and traditional legal measures
 - 13.6.2.1 The nature of customary law
 - 13.6.2.2 Examples of customary law and biodiversity
 - 13.6.2.3 Customary law in transition
 - 13.6.3 National legislation
 - 13.6.3.1 Regulatory Measures
 - 13.6.3.1.1 Species-orientated legal measures
 - 13.6.3.1.2 Regulating use of protected areas
 - 13.6.3.1.3 Other area-based legal conservation actions
 - 13.6.3.1.4 Land-use planning legislation
 - 13.6.3.1.5 Nature parks and protected landscapes
 - 13.6.3.1.6 Legal protection of representative habitat types
 - 13.6.3.1.7 Regulating processes and activities detrimental to biodiversity
 - 13.6.3.1.8 Regulating access to genetic resources
 - 13.6.3.2 Non-regulatory methods
 - 13.6.3.2.1 Financial incentives
 - 13.6.3.2.2 Covenants
 - 13.6.3.2.3 Easements
 - 13.6.3.2.4 Management agreements
 - 13.6.3.3 Combining regulatory and voluntary measures
 - 13.6.3.4 Environmental impact assessment and other legal institutions and procedures for conserving biodiversity
 - 13.6.4 International Law
 - 13.6.4.1 Regional and sectoral treaties
 - 13.6.4.2 The Convention on Biological Diversity
 - 13.6.4.3 Implementation and compliance
 - 13.6.4.4 Interaction between national and international legislation
 - 13.6.5 Conclusion
- 13.7 Building capacity for biodiversity management
 - 13.7.1 Introduction
 - 13.7.2 Human capacity
 - 13.7.3 Institutional capacity
 - 13.7.4 Infrastructure capacity
 - 13.7.5 Funding capacity
 - 13.7.6 Conclusion
